

This lab is great, but I can't do much on remarking.....

Q1:

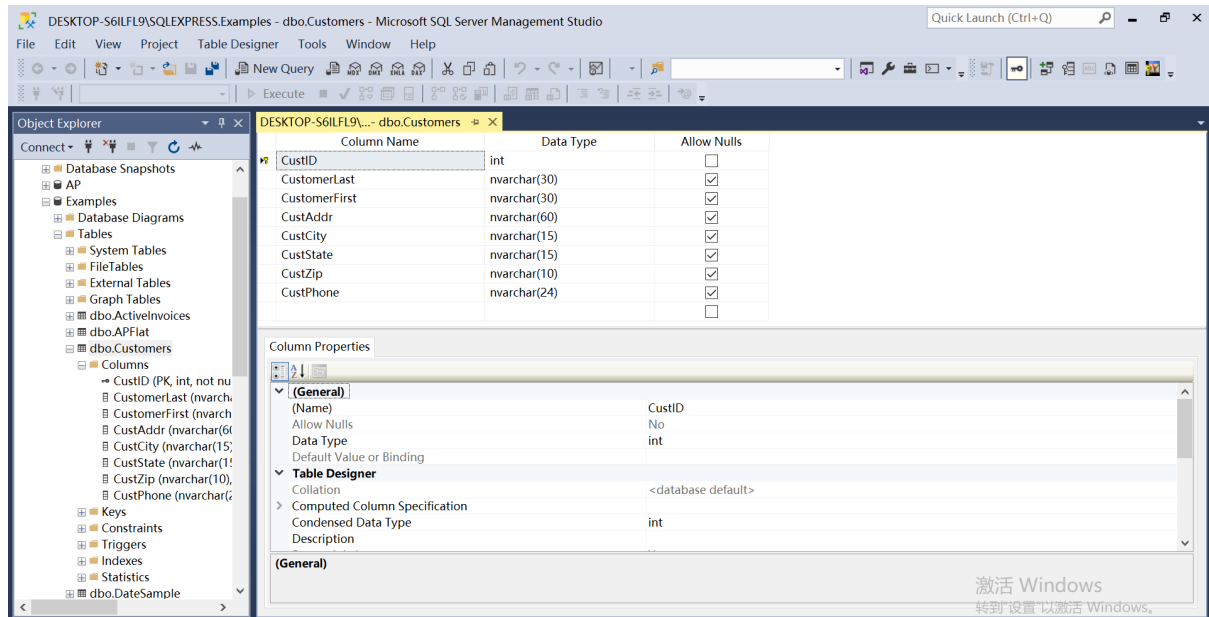

Q2:

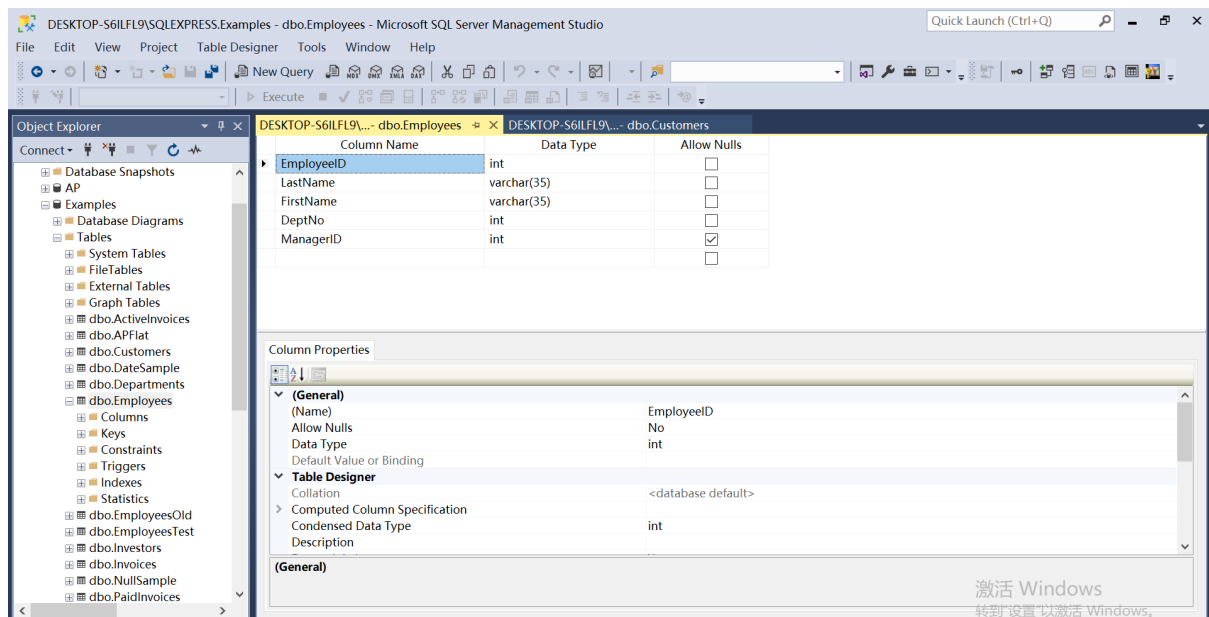

Q3:

The data type of of “CustAddr” column is character data which can store 30 characters

The identity column of “Employees” table is EmployeeID

## Q4 & Q5:

The screenshot shows the Microsoft SQL Server Management Studio interface. The title bar indicates the connection is to 'CustomersInMA.sql - DESKTOP-S6ILFL9\SQLEXPRESS.Examples (DESKTOP-S6ILFL9\wang (68))'. The Object Explorer on the left shows the database structure, including the 'Customers' table. The query editor in the center contains the following SQL query:

```
/*This line is to selet all the rows from a table*/  
SELECT *  
/*The selected table is 'Customers'*/  
FROM Examples.dbo.Customers  
/*The row be selected has a 'CustState = MA'*/  
WHERE CustState = 'MA';
```

The query has been executed, and the Results pane at the bottom shows a single row of data from the Customers table:

	CustID	CustomerLast	CustomerFirst	CustAddr	CustCity	CustState	CustZip	CustPhone
1	82	Nagy	Helvetius	722 DaVinci Blvd.	Concord	MA	01742	(351) 555-1219

A 'Windows' activation watermark is visible in the bottom right corner of the application window.
